Laser Safety Issues

- **Laser pointer, 3 mW:**
rather bright; could quickly damage the retina,
but: blinking reflex helps
- **Small Nd:YAG laser, 100 mW:**
invisible – no blinking reflex!
⇒ rather dangerous for the eyes
- **Larger Nd:YAG laser, 10 W:**
burns skin and clothes
- **Small Nd:YAG laser for Q-switched pulses:**
very hazardous even for small average output power
- **Industrial high power Nd:YAG or CO₂ laser, 1-10 kW:**
for welding; not beneficial for skin and eyes!
