# STATEMENT

---

---

---

---

**I made a garment which can be worn by different people for different occasions. It's reversible with one side stiff cotton and one side satin. I made it for reminding people the value of one garment and how we treat our garments means a lot for our environment. Furthermore, I tried my best to make the garment as a zero-waste one, by using the zero-waste pattern to cut the fabric and the yarn to trim the hem. All in all, this piece is made for against the over-consumption and waste issues in the fashion industry.**

# SYSTEM

---

---

# Resiliency

## System 1

(As a product)

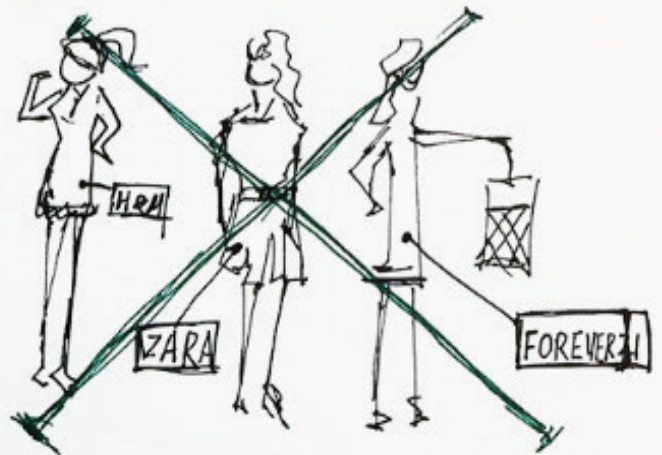

I The piece has adjustment "extending" fabric to allow different figures fitted in.

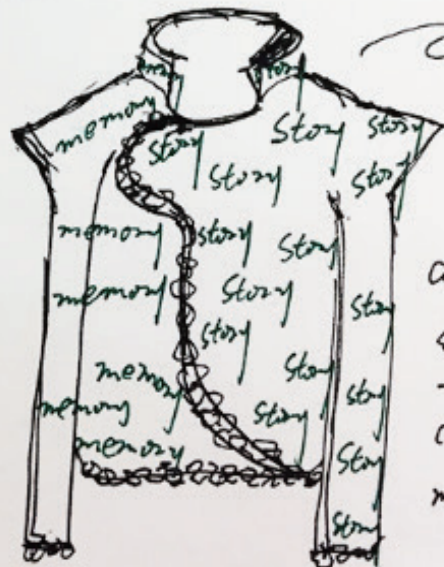

II The hem of the garment is treated & finished by yarn. So it's easy to either connect to another piece / knit for another extension to continue the story...

## System 2

(As a statement)

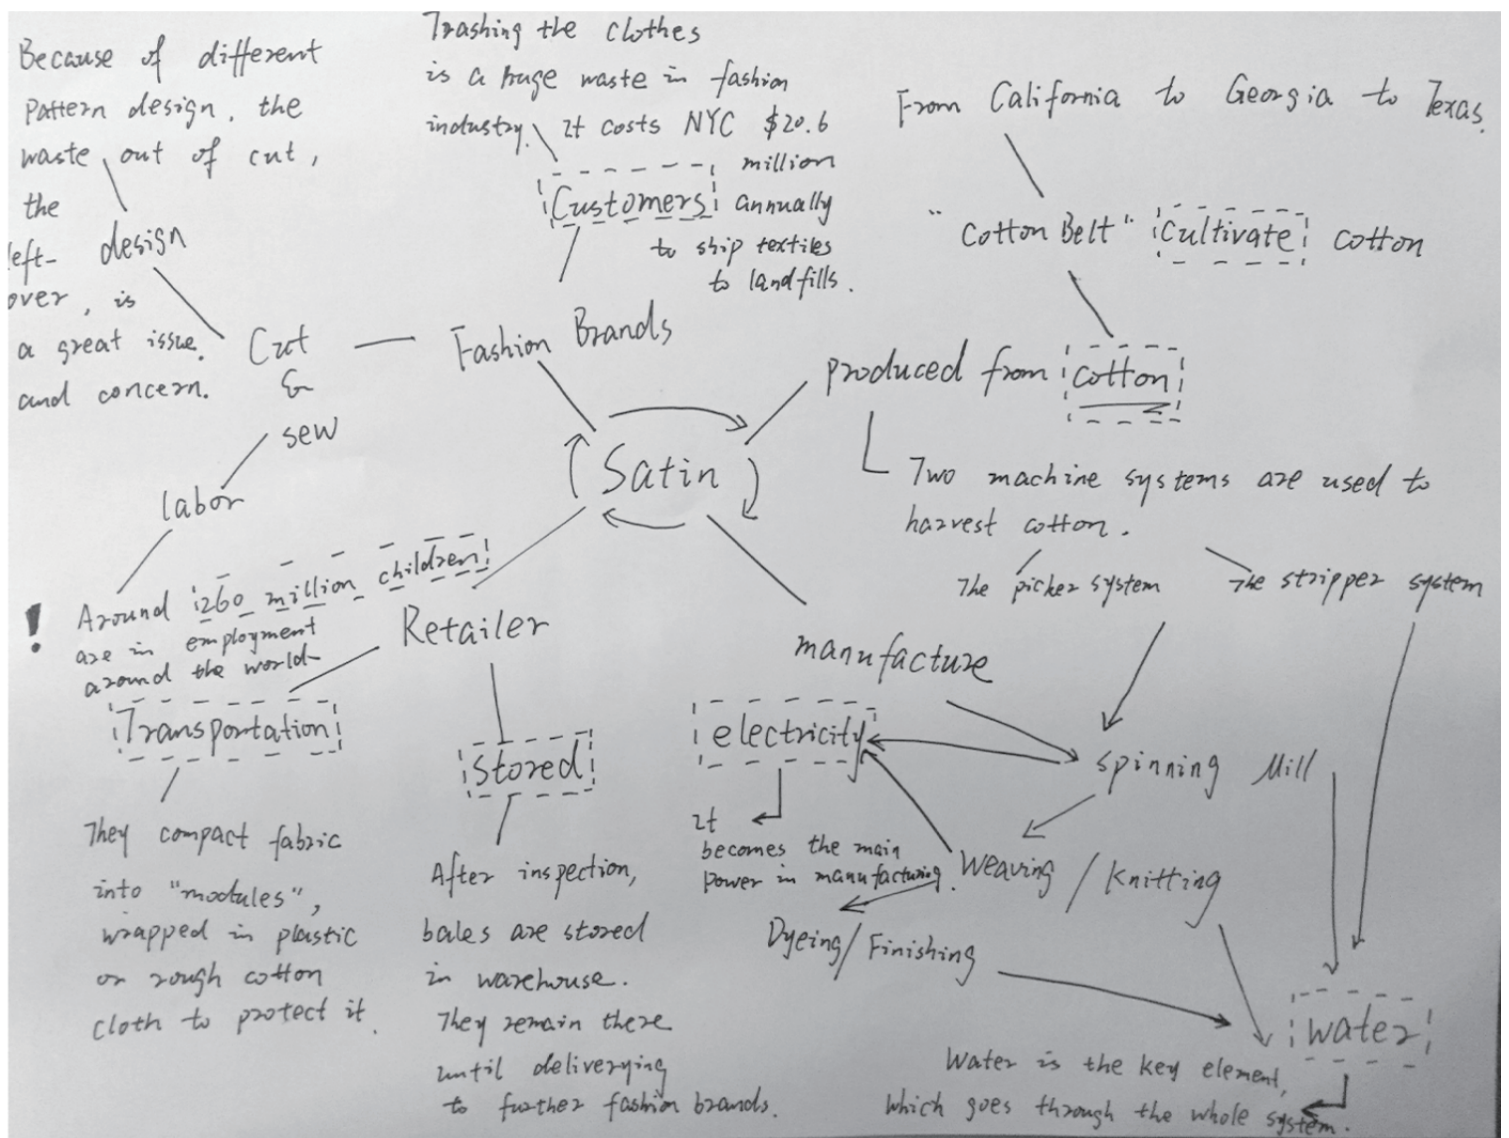

As a fashion designer, I think fast fashion can cause over-consumption issue, which is an enemy both for the environment & the personal style.

A garment containing story & memory can last much longer!!
