More than 100 years ago, in 1906, a major earthquake struck the San Francisco Bay Area, killing more than 3,000 people and leaving more than 225,000 homeless. The quake was the most powerful to ever hit the United States, with a magnitude of 7.9. It was also one of the deadliest, with more than 3,000 lives lost. The earthquake was a turning point in the history of the city, as it led to the construction of the first skyscrapers and the birth of modern architecture.

**"The Disaster's Impact
on the Bay Area's Growth and
Development"—*Part 1*
—*John Sweeney***

The earthquake of 1906 was a turning point in the history of the city, as it led to the construction of the first skyscrapers and the birth of modern architecture. The disaster led to the construction of the first skyscrapers and the birth of modern architecture.
