

WATER

I found this at a Chipotle near the school when I went out for dinner with my friends. This is made out of white paper and I found that it would be extremely sturdy to plant in it. I got a drink while I was at Chipotle and after I was done, I took it back to my dorm and washed it and dried it out so it would be reusable.

The paper cup being used for its original purpose

I think that this small container that used to be used to hold drinks would be a great way to plant in it because of its shape that it already holds as well as the sturdiness of the cup itself. Instead of using a ceramic pot, this reusable paper cup would be a great way to be sustainable and plant inside it. Although it doesn't originally have the purpose of holding plants, I think that I would definitely be able to make it work in order to be more sustainable.

The paper cup cleaned out and being ready to use to plant
