

Air Head

LULU ZHANG

The 'AirHead' is a portable A/C headband. It is designed for the near future, in a world where global warming results in a rise in global temperatures to the point where walking outdoors is difficult.

Bring the 'AirHead' everywhere you go and just put it on everytime it gets too hot. Simply adjust the settings to your liking using the buttons and screen on the side of the headband. It can be used to cool you down or warm you up. Moreover, the 'AirHead' does not require any batteries or electricity, instead it has heat sensors that absorbs the heat energy lost through the head and transfers it into energy that powers the 'AirHead'.

The inside rim of the headband is lined with cushion for comfort. Furthermore, the top and bottom of the headband have magnets that allows multiple 'Air-Heads' to be attached together to form a larger A/C system that can be used to cool down or heat up a room; group of people.
