

Why should artists integrate computer science into their practice?

# Where ART / Meets CODE

## Beginners Are Welcome

Formal computer science training isn't necessary. Artists can explore ways of creating through editing pre-made coding examples.

## Interdisciplinary Explorations

Coding can help every artist and designer broaden their abilities, whether they create film, fashion, data visualization, or music!

## Jump Straight In

When artists are ready to explore, software, libraries, and resources are available for free download such as Processing and Cinder.

## Unique, Collaborative Environment

Artists give back to libraries and free platforms that allowed them to create and explore. Creative coding is an ever-expanding field.
